ATHENA shooting block

Ballistic rubber block

DATA SHEET

Innovative

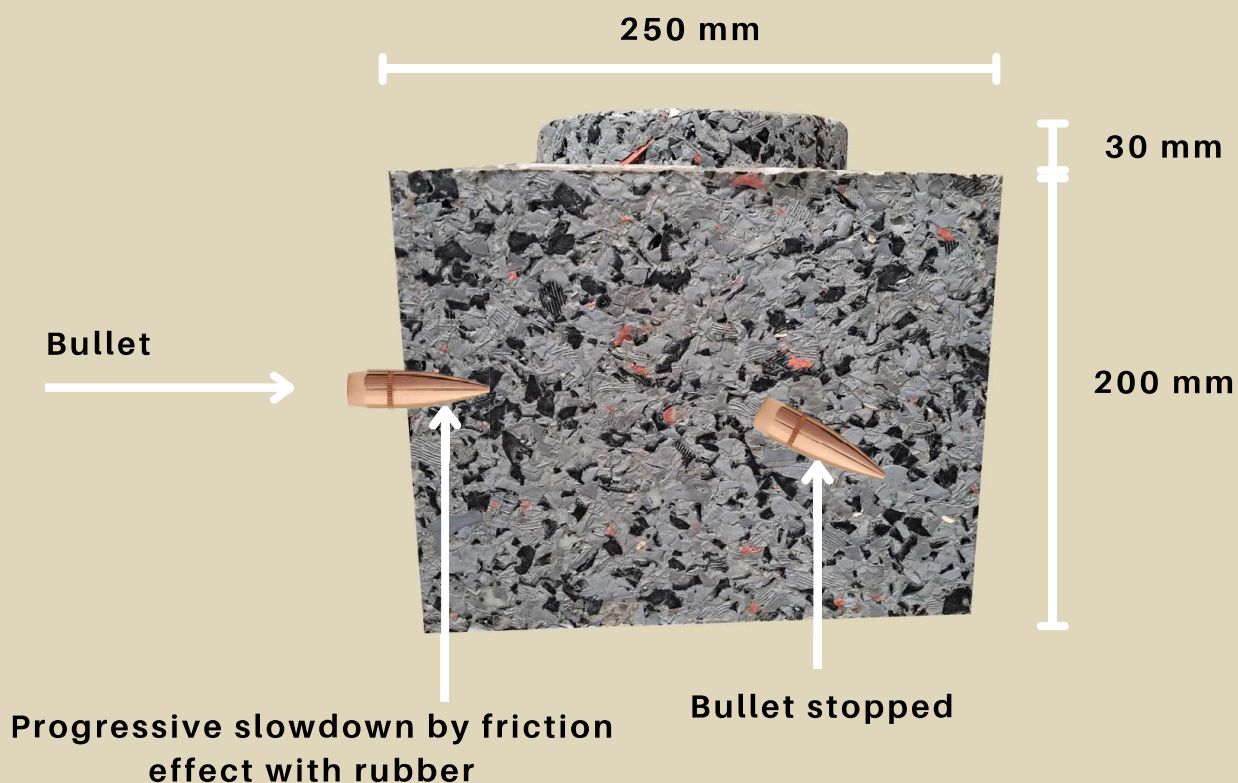

Pertinent

Affordable

Athena shooting block is a bullet trap that slows down and traps bullets thanks to the friction effect between the round and the rubber.

Once stopped, the bullet stays inside the block.

Athena also catches and traps bullet's fragments from a ricochet.

Characteristics

Type: Ballistic block

Calibers: All FMJ calibers up to 7,62 x 51 mm (included).

Composition: Polymer granulate with PU binder.

- Dimensions : L 500 mm x W 250 mm x H 200 mm
- Weight : 25 kg

Maximum height of an Athena complete wall: 3 m.

Rotproof: Does not rot.

Fireproof: EN13501 standard.

installation

Installation is free but always shoot through the 250 mm width.
Ideal position: around a PABARO-type bullet trap, in order to trap the rounds out of the PABARO.

Dots allow the blocks to perfectly and strongly fit together.

Safety warning : Every shooting range must insure that no bullets could ever get out of the range, even behind the bullet trap (Safety wall in concrete, armoured steel or sand berm).

Use

Athena shooting block is ready to be shot at and can stop FMJ rounds of 4.000 joules max, before beign replaced.

A regular visual inspection must be carried out every month, in order to check if a block need to be replaced.

Transport

Placement: 40 blocs max / palet of 1T.

Packaging: each palet is wrapped with plastic film and warranty tape.
